ABSTRACT

Managing personal finances has become more difficult in today's fast-paced and digital world. With the increase in online payments, subscriptions, and day-to-day expenses, many people—especially students and young professionals—find it hard to keep track of where their money is going. Most existing expense tracking apps only allow users to record transactions, but they do not help users understand their spending habits or improve them. Because of this, people often overspend, fail to save money, and struggle to achieve their financial goals.

SpendMate is designed to solve this problem by providing a smart and easy-to-use expense tracking system that goes beyond basic tracking. The main goal of the application is to help users not only record their expenses but also understand their financial behavior and make better decisions. It aims to build financial awareness and encourage users to develop better saving habits.

The application works as a complete personal finance management tool where users can track their daily expenses, set budgets, and monitor their savings goals. It provides a

simple and clean dashboard where all financial information is available in one place. SpendMate includes important features such as expense categorization, budget planning, goal tracking, and monthly reports. It also offers intelligent suggestions that help users reduce unnecessary spending and manage their money more effectively. Additionally, the app includes a group expense feature, allowing users to split expenses with friends easily.

The system is developed using SwiftUI, which ensures a smooth, modern, and user-friendly interface. The design focuses on simplicity so that users can easily navigate and use the app without confusion. It follows a structured and modular approach, making the system efficient and reliable.

The expected outcome of SpendMate is to help users take control of their finances in a simple and effective way. By providing clear insights and practical suggestions, the app helps users improve their spending habits, save more money, and plan their future better. What makes SpendMate unique is its ability to combine expense tracking with smart recommendations, making it not just a tracking tool but a helpful financial assistant.

1.1 Problem Background

In recent years, managing personal finances has become increasingly complex due to rising expenses, digital transactions, and lack of financial awareness among individuals, especially students. Most existing expense tracking applications primarily focus on recording transactions without providing meaningful insights or actionable recommendations. This limitation leads to poor financial planning, inefficient spending habits, and difficulty in achieving savings goals. Users often struggle to understand their spending behavior, resulting in financial instability and lack of control over their budgets.

1.2 Objective of the Project

The objective of SpendMate is to develop a smart and user-friendly expense tracking system that not only records financial transactions but also provides intelligent insights and recommendations to improve financial decision-making and saving habits.

1.3 Proposed Solution / System Overview

SpendMate is a comprehensive personal finance management application designed to track expenses, manage budgets, and analyze user spending patterns. The system provides a structured dashboard where users can monitor their financial activities in real time. The major components of the system include expense tracking, budget planner, goal management, AI-based recommendation engine, and group expense management (SquadPay). These modules work together to provide efficient financial monitoring, intelligent suggestions, and seamless user experience.

1.4 Key Features or Functionality

The application includes features such as daily expense logging, categorized spending analysis, budget allocation, savings goal tracking, and monthly financial reports. It also provides AI-driven insights to help users reduce unnecessary expenses. Additional features include group expense splitting, reminders for financial goals, and progress tracking with visual indicators.

1.5 Technology / Method Used

The system is developed using modern technologies including SwiftUI for frontend development and Supabase for backend services. It follows a modular architecture with secure authentication, real-time database management, and scalable cloud integration.

1.6 Expected Outcome & Benefits

SpendMate helps users gain better control over their finances by providing clear insights and actionable recommendations. It promotes disciplined spending, improves saving habits, and simplifies financial planning. The application is particularly beneficial for students and young professionals.

1.7 Original Contribution Statement

The proposed system uniquely integrates expense tracking with AI-based financial recommendations, offering a smarter and more proactive approach to personal finance management.
